Unit 2 Week 4: Weekly Individual Report

Time Dedicated to the Project:

This week I spent roughly a few hours working on the implementation for file uploading.

Contribution to the Project Development Process:

I worked on the implementation for uploading files. Once my version is merged, files should be able to uploaded from local devices and videos previewed before being fully submitted. I also came up with goals for this week and added tasks to the Jira and assigned group members tasks.

Demonstration of Applied Knowledge:

I demonstrated applied knowledge as Scrum master by using skills I have obtained to ensure good development practices. I also used my knowledge of MERN stack development to add to the source code.

Reflection and Lessons Learned:

This week I think I could have done a better job maintaining the workflow. I think I should spend more time setting goals for the end of the week so I have tasks to delegate team members. I also believe that I can add more by researching better methods for how we can make the user experience on our app better. I learned that it is important to gain knowledge of the entire project framework so that I can effectively add to all parts. I also learned about licensing for code that I use from other sources.
